01 INTRODUCTION: HOW CRYPTOCURRENCIES WERE CREATED

The first idea of electronic money originated a long time ago, in 1998, through a project called “B Money” created by Wei Dai. Soon after, another project named “Bit Gold” was also created, with encrypted solutions that used the “proof-of-work” system that digital assets use nowadays.

However, it was only 10 years after the first official cryptocurrency was created: Bitcoin. Bitcoin is the pioneering digital asset in the market, created by Satoshi Nakamoto, to overcome the many limitations that traditional financial institutions entail. While banks and popular monetary organizations are completely centralized and require a diversity of bureaucracies, cryptocurrencies come with a completely innovative system that allows its user to use decentralized digital money, without absurd fees and free of any paperwork that always delays and complicates the use of fiat money.

So, on October 31st, 2008, the first whitepaper in history was published: the official document presenting the futuristic project that is Bitcoin. The publication was made by someone with the pseudonym of Satoshi Nakamoto; however, the true identity of the creator of cryptocurrency until today has never been revealed.

The creation of Bitcoin has opened the way for thousands of new cryptocurrencies (altcoins) to be created from it, with a multitude of improvements and solutions for its users. Currently, there are more than 6000 types of digital assets on the market, and cryptocurrencies are considered the money of the future for being global, free of any monopoly, virtual, and much more practical.

In addition to all this, cryptocurrencies rely on Blockchain, which is one of the most popular and promising technologies of today.

Blockchain offers an incorruptible registration system, completely safe and at the same time transparent. It is definitely one of the great reasons for the popularity of cryptocurrencies.

Digital assets are constantly growing in the financial market due to the conveniences they offer, and uniting this technology with philanthropic initiatives can contribute to the construction of a much fairer and more promising tomorrow. By being global, cryptocurrencies can be a great ally to popularize important social initiatives - which is why NPO Coin aims to work with this segment. So, through this document, we will explain in detail the importance of the NPO Coin project.

02 WHAT IS A TOKEN

A token is a type of cryptocurrency that relies on a platform that is pre-established in the crypto market to exist. While cryptocurrencies commonly have their own ecosystem, with their own blockchain and other original systems, tokens use the system of some network of smart contracts that allow the addition of a range of digital assets.

Both cryptocurrencies and tokens have satisfactory benefits: cryptocurrencies have the differential of having their own independent ecosystem, offering an authentic service, while tokens offer all the reliability of an already established blockchain in the market and, therefore, a greater guarantee of protection and effective functionality. Because it is tied to a secure blockchain, tokens provide the customer with a well-established service within the crypto universe.

03 BLOCKCHAIN

Blockchain technology is what supports the reliability of cryptocurrencies since it is the system for registering its transactions. The name BLOCKCHAIN refers to a chain of blocks and works as a kind of digital ledger where all operations involving cryptocurrencies are recorded in a completely transparent way, visible to anyone who accesses the platform. No transaction registered in blockchain can be deleted or changed: once it occurs, it remains on the platform unconditionally.

If, on the one hand, blockchain offers this security of officially registered decentralized activities within the platform, avoiding any type of fraud, at the same time it protects the users' data since each one has its own security key. Your data is protected at the same time as each transaction takes place visibly and reliably.

Moreover, blockchain is famous for being an immutable system. For any hacker to be able to break a block within this chain, he would have to be able to do the same with every block arranged within it, since absolutely every block is interconnected - which means that to destroy one it is necessary to destroy all the previous ones - and each block is composed of very impenetrable complexity.

Blockchain is so valued by the financial market that it has been used by many companies and corporations, as an assured and immutable form of registration, which offers much greater control for the client and values the security of operations in general.

TRON NETWORK

Tron emerged through the creation of a project that happened in 2017, by Justin Sun, with the cryptocurrency Tronix (TRX), which was born as an ERC-20 from Ethereum, and it became independent through the development of its own blockchain.

The Tron blockchain can process approximately 2,000 transactions per second (TPS), it is known for being the fastest one in the market. When compared to the Bitcoin blockchain, which processes only 7 TPS per second, the efficiency of the Tron network is evident.

The Tron project was created to fight the centralization of the transit of entertainment in the virtual environment, it is capable of having several features thanks to its partnerships: Peiwo (a social media also created by Justin Sun, considered the Snapchat of China), Game.com (Tron made a partnership with this online gaming platform), and Gifto (a decentralized platform where you can offer virtual gifts).

Tron is a decentralized, agile, and intuitive network; an ecosystem with global content, completely free, facilitating the transactions within the platform, where its users can publish, store, and save their contents.

04 ABOUT NPO COIN

ABOUT THE CRYPTO-ASSET

NPO Coin is a token of the Tron network focused on philanthropic initiatives, to assist social projects, seeking to bring greater social equality and establish equality among people around the world. The name NPO Coin comes from the term nonprofit organization, which is used to classify organizations that only seek to benefit and help the collective. It is a currency focused on global donations, which arises to spread goodness.

NPO (currency ticker) has a maximum supply of 1,000,000,000 coins and acts as an intermediary between you and social initiatives. It uses all the convenience and globalization of technology in favor of the people, allowing anyone from anywhere in the world to contribute with many different social projects, making your donation in a decentralized and virtual way, at any time of your day and wherever you are.

It is a humanitarian project that was born as an active response against the social inequality that still plagues us today. NPO Coin is a very accessible token, which has a partnership with several social associations, making it possible to provide financial aid for:

- Philanthropic Organizations
- NGOs
- Projects in favor of the environment
- Technological projects (as a method of teaching and development)
- Religious institutions engaged in social initiatives.

PROFIT DISTRIBUTION

NPO Coin's profit distribution is carried out as follows:

- 20% of the total profit generated by NPO Coin is directly allocated to institutions we support
- 10% is destined for environmental projects
- 10% is destined for religious institutions and their projects
- 15% is destined for teaching and technological development projects
- 45% is intended for currency maintenance and administration

05 THE IMPORTANCE OF SOCIAL INITIATIVES

Did you know that every minute that goes by, nine children die of malnutrition in the world? According to the WHO (World Health Organization), malnutrition occupies the place of the greatest threat to the world's public health system, adding up to 178 million malnourished children in the world - apart from the absurd number of adults who suffer from the same evil. It is estimated that by the end of 2020, 12,000 people will die of hunger every day - a number that has increased as a result of the sad social and economic impacts left by the Covid-19 pandemic.

These figures are only a small part of the chaotic scenario we face today, of a world that loses humans every day due to our lack of

humanity to fight one of the greatest evils: hunger. We cannot deny the importance of this problem, and our silence about it needs to come to an end.

That is why a wide range of social projects are created, as a desperate attempt to avoid further harm and save the lives of people who are dying for the lack of empathy of others. These initiatives are usually organized in an independent and, obviously, non-profit way, seeking to guarantee the basic rights of each one and providing social assistance to several populations that are neglected or affected by humanitarian crises.

Any social project, no matter how small, is certainly something giant for that person who was about to die along with his or her hope. Although sometimes help seems like just a drop in an ocean of destruction, the combination of these drops can end up resulting in the rain in the future, capable of putting out the fire we face today.

06

UNION OF TECHNOLOGY WITH PHILANTHROPY

Focusing on these philanthropic solutions in favor of life and the construction of a better world, it becomes evident the need for the optimization of efficient actions and services that contribute to each cause.

With this in mind, the union of cryptocurrencies with social initiatives seems extremely promising! That is due to the fact that this technology stands out for its great advantage of being global and offering much faster and even cheaper operations. All this promotes a perfect environment for the development of social projects.

Through digital assets you can, for example, create a space for financial collection in a very short time and add participants from any corner of the world. You don't have to worry about changing your money to that of the project's country of origin, nor do you have to worry about the drastic changes in value from one country or another. Also, the virtual world provides a reach that would be impossible to achieve in any other way.

Just as we face horrible news every day, we also have access to extremely efficient and relevant projects, which through payments with digital assets can remain accessible for all of us. That is exactly the intention of NPO Coin: to provide to anyone interested in doing good the possibility to unite in a community and contribute to important projects capable of minimizing humanitarian and environmental problems, among others. It is your chance to build a safer, more equal, and fair tomorrow.

07 EXCHANGES THAT NPO IS LISTED AT

NPO currencies can be found in some of the best exchanges in the crypto market. Within these platforms, you can easily and securely buy, sell, and exchange your cryptocurrencies. You can also leave them stored there while checking values and information about the currency.

08 NPO WALLET

Wallets are virtual wallets where you can safely store your crypto-assets. It works like a regular physical wallet, but much more secure since all its amount is stored in a virtual universe almost impossible to be violated.

NPO offers its customers a wallet of its own, where you can store or transact your crypto in a completely protected, simple, and uncomplicated way.

09 PARTNERSHIPS

NPO Coin has established partnerships with some philanthropic associations, all available on our website, of which you can be an active agent of transformation. Also, NPO supports a wide variety of social projects that provide help to the underprivileged, it helps these people to be inserted in society and the current market and promotes projects of environmental and technological nature.

It also proposes the possibility of raising funds that contribute to eventual social initiatives that may need to be carried out as a consequence of a catastrophe.

10 CONCLUSION

NPO Coin comes as an urgent response to the decline of humanity, where the human being tends to sink into his own self-centeredness and not see his neighbor languishing before his eyes. This token appears as a solution not only to problems of social inequality and support for victims of disasters but also as a possible cure for the lack of empathy we face in our times.

NPO is an extremely necessary currency, and one of the only ones that are non-profit, but focused on contributing to those who cannot afford to support themselves. It seeks to build a better world, overcoming as much as possible the damage that humanity has caused.

Technology is a very impacting weapon in the whole world, which opens possibilities of a much more efficient union for philanthropic purposes. That's why NPO Coin came up with this idea of uniting the useful to the pleasant: all the easiness, comfort, and convenience of digital assets to social initiatives that can save the earth.
